

INTERNAL TEAM DOCUMENT

NEDS Drishti

by Niranjan Enterprises Digital Solutions

Team Playbook

Everything your team needs to run the platform confidently — roles, workflows, AI tools, client management, and the monthly operating rhythm.

Version 4 · May 2026 · Confidential — Internal Use Only

Contents

1. Roles & Access	3
Owner · Account Manager · Content Creator · SEO Analyst · Client	
2. Client Onboarding	4
Add client · Assign team · Send onboarding link · Review submissions	
3. Content Studio	5
Compose · AI Generate · Schedule · Approve · Calendar	
4. AI Studio — 11 Tools	6
Caption · Rewriter · Repurposer · Thread/Carousel · Bio · Hashtags · Ad Copy · Persona · Competitor · Email · AI Search Visibility	
5. Client Communication	7
Action Items · Messages · Client Portal	
6. Audit & Platform Optimize	8
Run audit · Score cards · Per-check AI suggestions · Optimize workspace	
7. Analytics, Reports & Client Portal	9
Dashboard · PDF reports · AI digest · Schedule monthly emails	
8. Invoices, Settings & Activity	10
Create invoices · Branding · API keys · Team management · Activity log	
9. Monthly Operating Playbook	11
Week-by-week rhythm · Who does what · Checklists	

Roles & Access

Who can do what on the platform

Owner

Full Access

- All agency settings & billing
- Create / delete clients
- Manage team (invite, promote, remove)
- Approve / reject content posts
- View Activity Log
- Create & send invoices
- Access all AI tools
- Generate AI weekly digest

Account Manager

Account Manager

- Create & edit clients
- Assign team to clients
- Approve / reject content posts
- Send onboarding links & reports
- Create action items & messages
- All AI tools
- Invoices (view + send)
- View Activity Feed

Content Creator

Content Creator

- Compose & schedule posts
- Use AI Studio tools
- Upload media to library
- Manage hashtag sets
- View clients (assigned)
- Cannot approve posts
- Cannot delete clients

SEO Analyst

SEO Analyst

- Run & manage audits
- Platform optimization checks
- AI suggestions per check
- Download audit PDFs
- View analytics
- Use AI Studio tools
- Cannot manage team or billing

Client Role (Portal Only)

Clients log in via their own portal (**/portal**) — they see their dashboard, platform scores, approved content, action items, and messages. They cannot access any agency-side pages.

Tip: To change a team member's role, go to **Settings** → **Team**, click the role dropdown next to their name, and save. Role changes take effect on their next page load.

Client Onboarding

From lead to fully set-up client in 4 steps

Step 1 — Create the Client

- 1 Go to **Clients** → **New Client**
- 2 Fill in: Business name, contact email, industry, location, brand name, target audience, competitors
- 3 Set status to **Active** and click Save. The creator is auto-assigned.

Step 2 — Assign Team Members

- 1 Open the client → go to the **Team** tab
- 2 Click **Assign Member**, select the user, click Assign
- 3 Assigned users see this client in their dashboard and content filters

Step 3 — Send Onboarding Questionnaire

- 1 Go to client → **Reports tab** → **Send Onboarding Link**
- 2 A branded email is sent to the client's contact email with a secure link (valid 7 days)
- 3 Client fills in: business info, social handles, goals, brand identity — no login required
- 4 Submission auto-populates the client record (industry, audience, brand tone, competitors, handles)

Note: You can resend the link at any time — it resets the token and expires the old one. Each client has one active link at a time.

Step 4 — Review & Configure Platforms

- 1 Review the submitted data in **Client** → **Overview**
- 2 Go to **Platforms tab** — run the first optimization check for each active platform
- 3 Create the first **Action Items** based on the top FAIL/WARN checks

Creating a Post

- 1
- Select client — required before generating captions or adding media
- 2
- Select platforms — character limit shown automatically per platform combination
- 3
- Write caption — or type a brief topic and click **AI Generate** (client must be selected first). A **variant picker** appears showing 5 cards — click **"Use this"** on the one you want. The caption and its hashtags load instantly. Click × to dismiss and write manually.
- 4
- Add hashtags — type and press Enter, or load from a saved set
- 5
- Add media — pick from the client's media library (upload images/videos there first)
- 6
- Set schedule date & time — if filled, clicking either Save button automatically sets status to Scheduled

Save Options

Button	Status set	When to use
Save as Draft	Draft (if no date set)	Work in progress, not ready for review
Save & Schedule	Scheduled	New post with a future date — appears in Scheduled tab
<i>Either button with date set</i>	Scheduled automatically	Setting a date/time always marks the post as Scheduled

Approval Workflow

Content Creators submit posts → Owner or Account Manager sees the **Approval bar** at the top when editing. They click **Approve** (turns green) or **Reject** (sends back for revision). Only approved posts can be published.

Content Calendar

Go to **Content** → **Calendar** to see all scheduled posts in a monthly grid. Click any post chip to jump straight to editing.

Templates: In the composer, click the Templates button next to the Caption label to load a saved template, or save the current caption as a new template for reuse. Click × in the top-right of the popup to close it without selecting.

Go to **AI Studio** in the sidebar. Select the client first — the AI uses their brand name, industry, and audience to personalise every output. Results are cached so identical inputs reuse the previous result (skip cache with the checkbox).

Content

Caption Generator

5 platform-optimised caption variants in a clean numbered list. Provide a topic brief and select the platform and tone.

Content

Content Rewriter

3 rewritten variants of any existing content: professional, conversational, and bold. Great for repurposing older posts.

Content

Content Repurposer

Turn one piece of content (blog, video, podcast) into 10 platform-native formats. Paste text — do not paste a URL.

Content

Thread / Carousel Writer

LinkedIn carousel (10 slides) or Twitter/X thread (10 tweets) from any topic. Includes hook, slides/tweets, and CTA.

Content

Post Ideas Generator

30 content ideas with format, hook, and 2–3 point outline each. Use at the start of every content month.

Social

Profile Bio Optimizer

3 optimised bio variants with keyword analysis and character counts for any social platform.

Social

Hashtag Research Tool

30 hashtags across 3 tiers (niche / mid / broad) formatted as a table. Saved automatically to the client's hashtag sets.

Ads

Ad Copy Generator

Google Ads (15 headlines, 4 descriptions, RSA combos, sitelinks) and/or Meta Ads copy. Location and keyword-aware.

Research

Audience Persona Builder

Full persona: demographics, psychographics, pain points, goals, objections, content triggers, and messaging guide.

Research

Competitor Analyzer

Content gaps, positioning opportunities, 10 content ideas competitors aren't doing, and differentiation strategy.

Email & Reviews

Email Copy Writer

Full email campaign: 5 subject line variants, preview text, body with hook/value/CTA, and button text options.

★ NEW — AI Search Visibility Audit (GEO)

Go to **AI Studio** → **AI Search Visibility Audit**. Enter the client's brand name, website, industry, location, key services, and target keywords. The AI scores their visibility across 6 dimensions:

- **Schema & Structured Data** — machine-readable signals
- **E-E-A-T Signals** — expertise, authoritativeness, trustworthiness
- **Content Depth** — how well content answers intent questions
- **Citation Worthiness** — likelihood of being cited by AI engines
- **Knowledge Graph** — entity recognition and association
- **Online Reputation** — reviews, mentions, sentiment

Output: an overall score (0–100), per-dimension scores, 4 Quick Wins (low effort, high impact), and 3 Long-Term Strategies. Use this as the starting point for any GEO (Generative Engine Optimisation) service.

When to use: At the start of an SEO/GEO engagement, at quarterly reviews, or when a client asks "why aren't we showing up in ChatGPT / Google AI answers?"

Posting Time Optimizer & Engagement Analyzer

Posting Time Optimizer (AI Studio → Posting Time Optimizer): Evidence-based optimal times per platform and location. Enable "Custom AI advice" with the industry field for tailored tips.

Engagement Analyzer (AI Studio → Engagement Rate Analyzer): Input follower count, avg likes/comments/shares. Get engagement rate, industry benchmark, percentile, and AI improvement recommendations (triggered automatically for average or below-average accounts).

Action Items

Go to **Client** → **Action Items tab**. Action items are tasks assigned to the client (e.g. "Share your logo files", "Approve this month's content plan").

- 1 Click **New Action Item** — enter title, description, and due date
- 2 An email notification is sent to the client's contact email automatically
- 3 Progress: **Start** (→ In Progress) → **Done** (→ Completed). Overdue items show a red border.

Note: The due date field accepts a calendar date — always fill it in so the client sees a deadline in their portal.

Messages

Go to **Client** → **Messages tab** for a threaded chat between the agency and the client. Messages are visible to both sides (agency staff see the full thread; client sees it in their portal). Press **Enter** to send, **Shift+Enter** for a new line. Messages are marked as read automatically when the tab is opened.

Client Portal

Clients log in at **nedsdrishti.in** with their own credentials and see:

- Overall platform health score
- Per-platform optimization scores
- Last audit results
- Pending action items (with due dates)
- Approved content posts
- Message thread with the agency
- Monthly performance report download

Audit & Platform Optimize

Score every aspect of a client's digital presence

Running an Audit

- 1 Go to **Clients** → **[Client]** → **Run Audit** (or navigate to `/audit/:clientId`)
- 2 Select audit type — the system runs 70+ checks across 7 modules: Website, SEO, Google My Business, Social, Content, Ads, Email
- 3 Review each check: mark PASS / WARN / FAIL / N/A, add notes and evidence links
- 4 Click **Mark Complete** — the audit is locked and a score is calculated
- 5 Download the branded PDF report from the audit detail page

Status labels: A freshly created audit shows **"Not Started"** (grey) on the audit list — this is not an automated scan. Once you mark any check, it changes to **"In Progress"** (blue). It becomes **"Completed"** (green) only after you click Mark Complete.

Platform Optimizer

Go to **Optimize** → **[Client]**. Each platform (LinkedIn, Instagram, Facebook, Google My Business, YouTube, Twitter, TikTok, Pinterest, Google Ads, Email, WhatsApp) has a score card showing PASS/WARN/FAIL check counts and a score trend chart.

- 1 Click a platform card to open the workspace
- 2 Use the category sidebar to navigate check groups
- 3 Set each check to PASS / WARN / FAIL / N/A with notes and evidence
- 4 Click **Get AI Suggestion** on any FAIL/WARN check for a specific recommendation
- 5 Use **Run AI for All** to bulk-fill AI suggestions for all missing checks at once

Optimize Home: The `/optimize` page shows all clients as cards with their average score and per-platform bars — great for spotting which clients need attention at a glance.

Analytics Dashboard

Go to **Analytics** in the sidebar. See: total clients, posts this month, average platform score, total AI usage, platform score bar chart, post status breakdown, top clients by score, audit tiles, and recent posts. PDF download button at the top right.

Client Performance Reports

- 1 Go to **Client** → **Reports** tab
- 2 **Send Report Now** — generates a branded A4 PDF with scores, content activity, and audit results; emails it to the client's contact email instantly
- 3 **Schedule** — set monthly/weekly/biweekly; the system auto-emails on the 1st of each month (or per schedule)

AI Weekly Digest

Go to **Dashboard** → **Generate AI Digest**. Claude writes a narrative summary of the week's agency activity (posts published, clients updated, audits run, AI usage). Send it to yourself or the owner's email as a weekly briefing.

Platform Guide PDF

Team members can download the full platform guide at any time: go to **Help** in the sidebar → click **Download PDF Guide**. The guide is always generated live with the latest content.

Invoices

Go to **Invoices** in the sidebar (Owner and Account Manager only).

- Create invoices with line items, tax percentage, due date
- Invoice numbers auto-generated: INV-YYYY-NNN
- Status flow: **Draft** → **Sent** → **Paid** → **Overdue**
- PDF generated and emailed to client on Send
- Webhooks fire on invoice.sent and invoice.paid events

Settings

Tab	What you can do
Branding	Agency name, logo, primary & accent colours, font, tagline — applied across client portals and PDFs
API Keys	Add Anthropic (AI), SMTP (email), PageSpeed, Ahrefs, DataForSEO keys. All stored AES-256 encrypted. Shortcut available from Dashboard setup reminder.
Team	Invite team members by email, set role, remove members
Webhooks	Create webhook endpoints for post.approved, post.published, invoice.sent, etc. Each has an HMAC-SHA256 signing secret.
My Profile	Change your name, email, or password (requires current password)

Activity Log

Go to **Activity** in the sidebar (Owner and Account Manager only). Every significant action is logged: client created/deleted, post approved, invoice sent, audit completed, onboarding submitted. Filter by action type. Useful for team accountability and client audit trails.

AI Usage Dashboard: Go to **AI Studio** → **Usage Dashboard** to see monthly AI costs by tool, total tokens used, and the full generation history. Monitor for budget spikes here.

Monthly Operating Playbook

The week-by-week rhythm for running client accounts

Week 1 — Plan & Create

Who	Task
AM	Review last month's analytics; send performance report to each client
AM	Create action items for the month; update client briefs if goals changed
CC	Run Post Ideas Generator for each client (30 ideas per client per platform)
CC	Draft & schedule the month's content in Content Studio; submit for approval
AM	Approve or reject content; send feedback via Messages
SA	Run platform optimization checks; update PASS/WARN/FAIL on all active platforms

Week 2 — Optimise & Audit

Who	Task
SA	Run AI suggestions for all FAIL checks using "Run AI for All"
SA	Run AI Search Visibility Audit for clients in GEO engagements
SA	Run full audit if due; download and share PDF with AM
AM	Review optimization results; create new action items for critical fixes
CC	Generate any mid-month ad copy or email campaigns needed

Week 3 — Engage & Adjust

Who	Task
AM	Check Messages — respond to any client queries in the portal
AM	Review action item statuses; chase any overdue items with client
CC	Top up content schedule if gaps found in calendar view
SA	Run Engagement Analyzer for key clients; document rate vs. benchmark
All	Check AI Usage Dashboard — watch for unexpected cost spikes

Week 4 — Report & Wrap

Who	Task
Owner	Generate AI Weekly Digest; review agency-wide performance
AM	Confirm all scheduled reports are set up (will auto-send on 1st)
AM	Create / send any pending invoices; follow up on outstanding payments
AM	Brief the team on next month's priorities in the Messages or action items
All	Archive completed action items; review activity log for the month

Monthly report emails fire automatically on the 1st of each month for clients with a schedule set. Verify the schedule is configured in Client → Reports for every retainer client.
